MOTOR FEATURE

Producing motor since 2008. Every motor must test 3 times during production with 100% full inspection. All of our engineers have rich experience, they work here since our factory established.

and

Difference between asbestos
lubricating oil inside the motor

There are two materials inside the motor. Asbestos and Lubricating oil. As time goes by, the oil in the asbestos will vanish gradually. Once the asbestos becomes dry, the motor gets slow down. While lubricating oil keeps much longer than asbestos. The oil will melt when motor working and becomes lubricate. Also, it increases the work efficiency of the motor. So the lifespan will be longer.
